August 2026

Page-2: Abstract

- This project is a barber shop website called BarberShop-Services, built using React.js for the frontend. The website includes four pages: Home, Services, About, and Contact. It features a responsive design that works on both desktop and mobile devices. The Services page displays pricing cards dynamically rendered from an array. The Contact page includes a booking form that integrates with WhatsApp API, allowing customers to send appointment requests directly to the shop's phone. The project uses Tailwind CSS for styling, React Router for navigation, and Vite as the build tool. Version control was managed using Git with multiple commits, and the website was deployed on Vercel.

Page-3: System Design

- The website follows a Single Page Application (SPA) architecture using React Router for navigation without page reloads.
- Architecture:
 - User Browser → React Router → Page Components
 - Navbar and Footer are shared across all pages
 - Pages: Home, Services, About, Contact

Page-4: Technologies Used

Technology	Purpose
React 18	Frontend UI library for building components
React Router DOM	Client-side routing for SPA navigation
Tailwind CSS	Utility-first CSS framework for styling
Vite	Next-generation build tool and dev server
Git & GitHub	Version control and code hosting
Vercel	Cloud platform for frontend deployment

Page-5: Code Snippets (Part 1)

Code Snippets

1. Routing Setup (App.jsx):

```
<Routes>
  <Route path="/" element={<Home />} />
  <Route path="/services" element={<Services />} />
  <Route path="/about" element={<About />} />
  <Route path="/contact" element={<Contact />} />
</Routes>
```

2. Dynamic Rendering (Services.jsx):

```
{services.map((service, index) => (
  <div key={index}>
    <h3>{service.name}</h3>
    <span>{service.price}</span>
  </div>
))}
```

Page-6: Code Snippets (Part 2)

3. WhatsApp Integration (Contact.jsx):

```
const whatsappURL =  
`https://wa.me/${YOUR_WHATSAPP_NUMBER}?text=${whatsa  
ppMessage}`  
window.open(whatsappURL, '_blank')
```

4. State Management (Contact.jsx):

```
const [formData, setFormData] = useState({  
  name: "", phone: "", service: "", date: "", message: ""  
})
```
